

Low Dose Sinus Comparative Study

Same patient is represented in each image

5/25/2011

6/8/2012

Imaging Healthcare Specialists has achieved exemplary success in reducing radiation doses in CT imaging by 50 to 90%. This was accomplished by developing smart CT protocols based on individual patient's size and body mass. Additionally, we were the first outpatient imaging company in the country to acquire SafeCT™ (by MedicVision Imaging Solutions). This advanced image reconstruction technology further enhanced our ability to reduce dose while ensuring optimal diagnostic quality.
