

# Low Dose Urogram Comparative Study

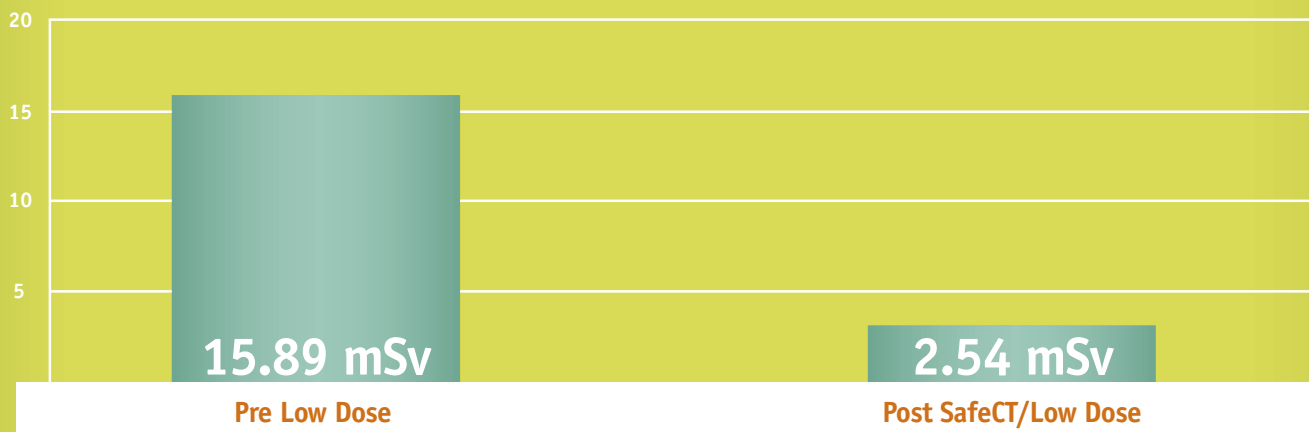

Same patient is represented in each image

4/26/2011

7/27/2011

Imaging Healthcare Specialists has achieved exemplary success in reducing radiation doses in CT imaging by 50 to 90%. This was accomplished by developing smart CT protocols based on individual patient's size and body mass. Additionally, we were the first outpatient imaging company in the country to acquire SafeCT™ (by MedicVision Imaging Solutions). This advanced image reconstruction technology further enhanced our ability to reduce dose while ensuring optimal diagnostic quality.
